Excel Basics Assignment

1.Explain the difference between Relative, Absolute and Mixed Cell Referencing. You have the following dataset:

-> Relative Cell Referncing:
Changes automatically when you copy the formula and used for repeated calculations. EX: =A1+B1 in cells C1 is copied to C2, it becomes =A2+B2

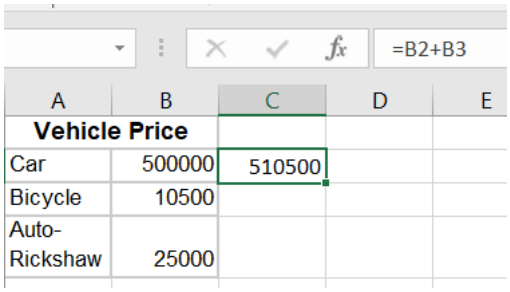
-> Absolute Cell Referncing:
Remain fixed no matter where the formula is copied, Written with $ Ex: =A1+B1 in cells C1 is copied down only to A1 canges, $B1$1 stay constant.

-> Mixed Cell Referncing:
Only row OR column is fixed. Ex:$B1 column fixed, row changes,B$1 → row fixed, column changes

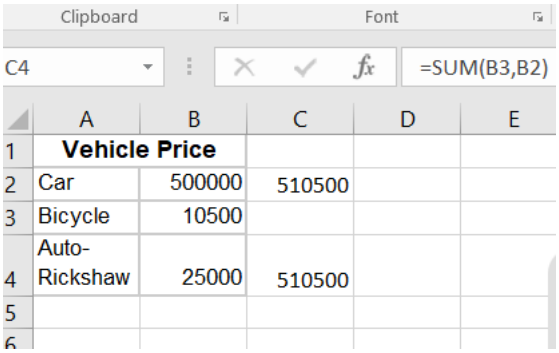
Vehicle	Price
Car	500000
Bicycle	10500
Auto-Rickshaw	25000

2. Write a formula to calculate the total sales of Car and Bicyle only only.

-> For clculation the ttal sales of car and bicycle only we can simply use =B2+B3 to get answer 510500



or we can uses =sum(B2+B3) to get answer both will gave same answer.



3. Using the data below, write a formula to calculate the average sales of items priced above 100 but less than 300:

Item	Price	Sales
Item A	90	1000
Item B	150	1200
Item C	250	1500

We can apply simple formula Only Item B (150) and Item C (250) are included Average = (1200 + 1500) / 2 = 1350

=(C4+C3)/2

	A	B	C	D	E
	Item	Price	Sales		
	Item A	90	1000	1350	
	Item B	150	1200		
	Item C	250	1500	1350	

Or we can use funtions in simple way

Clipboard Font Alignment Number Styles

D2 =AVERAGEIFS(C2:C4, B2:B4, ">100", B2:B4, "<300")

	A	B	C	D	E	F	G	H	I
1	Item	Price	Sales						
2	Item A	90	1000	1350					
3	Item B	150	1200						
4	Item C	250	1500

5. Calculate the Total Sales for each row using a formula.

```
->  Total sales for each row by using basic formula of multiplication for all
```

H2 =E2*F2
